

For Immediate release

Global Oxygen Development Corp. secures 100 million amazon rainforest trees from harvesting, using Co2Bitcoin for payment.

In an agreement with Brazilian Landowner, Vstec – Investimentos e Participacoes – EIRELI, Global Oxygen Development Corp. has signed a contract to purchase 100 million trees in the region thus saving them from harvesting and de-forestation and ensuring that they will be preserved for the coming generations.

Global Oxygen Development Corp. is an International Company specializes in tropical forest carbon and efficient cook stoves projects. the headquarter is established in Brooklyn New York (USA) with subsidiaries in Brazil to lead South America's operations and office in France to head Project Origination, financing and development in African and Asian continents.

Global Oxygen Development Corp.'s REDD forest projects are originated, founded and developed on a basis of good environmental integrity, transparency and governance which can not only improve the livelihoods of the rural poor but increase and empower their resilience to continuing challenges such as climate change.

A Global player and pioneer in forest carbon activities reduction and low carbon economy by enhancing organizations and individuals to handle their role to mitigate climate change. Building upon a strong carbon projects expertise, partnership and network, Global Oxygen Development Corp. empowers societies to responsibly and sustainably care for nature and climate for the well-being of humanity.

Global Oxygen Development Corp. is devoted to serving societies adopt a more sustainable approach to forest management and development, one that considers and values nature at every turn.

Global Oxygen aims to:

- Support financial independence among marginal communities around the world by building livelihoods for farmers with value generated by the sale of Carbon Credits sales that will entail protection of the forested environment and promote initiatives based on sustainable activities under green standards; and
- Raise these communities' standard of living, reduce outward migration and generate a sustainable level of economic
- Global Oxygen's activities are focused upon projects which reduce the volume of GHGs emitted into the atmosphere from deforestation and/or forest degradation in developing countries. Those projects located in developing countries are termed REDD Projects or Efficient Cook Stoves Projects and are currently eligible to generate respectively VERs pursuant to voluntary validation and verification schemes (including the Voluntary Carbon Standard) and CERs .

Co2Bit to offer a new and unique Crypto offering. To help alleviate the struggles of indigenous peoples in protecting their natural resources and fill the need for basic dependable energy.

Co2Bit is a Secure Network Based Digital Asset created as a means to finance and promote the proliferation of profitable sustainable carbon neutral energy generation to enable evolving participation in our global economy for all.

By purchasing and using this currency you help to finance the reduction of our global carbon footprint and bring sustainable power to disadvantaged people globally, including in the most remote areas of the world. By financing and delivering a service utility to users, much like cloud computing, previously insurmountable start-up barriers are mitigated.

Additional profitable projects include the implementation of micro-grids to insulate communities, companies and dwellings from broad unplanned power outages or denial of service attacks.
